Cover photograph (Copyright © 2016, American Society for Microbiology. All Rights Reserved.): Protection from progressive pulmonary pathology with the tuberculosis vaccine candidate ID93/GLA-SE 8 months following challenge with *Mycobacterium tuberculosis* HN878 in C57BL/6 mice. A representative photomicrograph of a hematoxylin and eosin-stained lung section from an animal in the survival group is shown. Lesions within the lungs of ID93/GLA-SE-vaccinated mice are limited, with high frequency of lymphocytes and absence of neutrophils as well as necrosis. Magnification, ×100.
